

Fire Blanket

Fire blankets that we, as Techjack, manufacture have been produced from high temperature resistant fiberglass fabric that does not contain asbestos for your security of life and property in accordance with TS EN 1869.

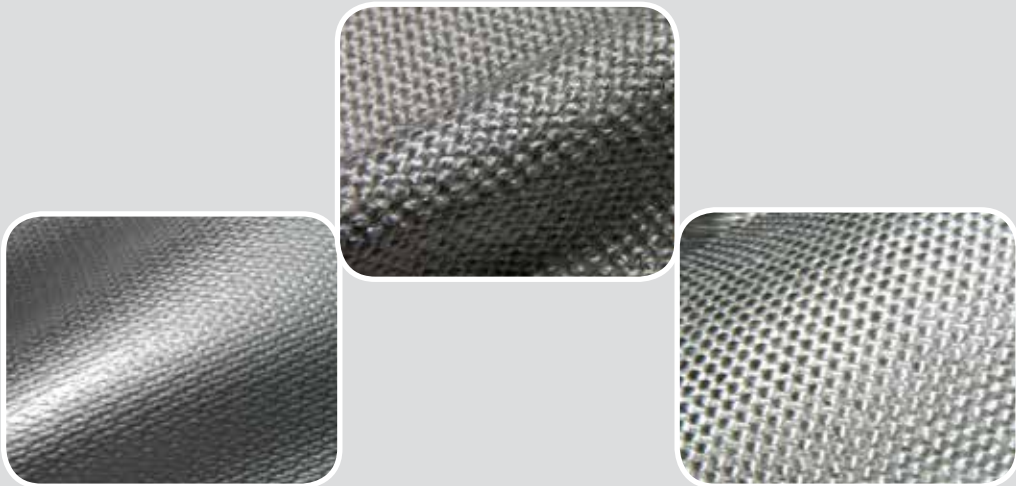

Areas of usage are places susceptible to fire:

- Plants
- Hospitals
- Lands
- Schools
- Hotels etc.

How to Use:

- Throw over flames at the beginning of fire,
- Victims of fire should cover themselves with the blanket and leave the site,
- Important documents and equipments required to be saved from fire should be covered with the blanket.

In order to make it easier to hold Techjack fire blanket, high temperature resistant fabrics were used on it and there are pockets. Techjack fire blanket is a product that can be easily hanged where it will be used and that has instruction manual with an original caser.
